A STUDY OF ONLINE SHOPPING CONSUMER BEHAVIOUR IN CHENNAI

G.R.Shalini, Research Scholar, Vels University, Pallavaram, Chennai, Tamil Nadu, India.
K.S.HemaMalini, Associate Professor, Vels University, Pallavaram, Chennai, Tamil Nadu, India

ABSTRACT: The purpose of this study is to understand and evaluate the consumer behavior towards online shopping specially done in case of Chennai city. The source of data is collected is through primary data and also collected structured questionnaire. The study finally concludes that in Chennai city online shopping is increasing tremendously. The factors which affect the consumer buying behaviour are preference, risk and frequency of buying of online consumer buyers.

KEYWORDS: Online shopping, Consumer buying behaviour, Factors affecting buying behaviour.

I. INTRODUCTION

Online shopping behaviour refers to the process of purchasing products or services via the Internet. The process consists of five steps similar to those associated with traditional shopping behaviour (Liang and Lai 2000). Consumers use internet for different purposes like searching product features, prices or reviews, selecting the products through online, placing order and making payments and getting delivered that products by different means (Sinha, 2010). Studying the factors affecting online shopping behaviour of a consumer is one of the most important research in e-commerce during these decades (Mohammadhossein Moshref javadi, 2012). The research or case studies of online consumer buying behaviour is important because it helps to know about consumers demands, it helps to understand and analyze that when consumers buy products online ?and who buy products online ? and how consumers mindset for purchasing the products online ? I think the whole concept of online shopping has altered in terms of consumer’s purchasing or buying behaviours and the success of E-tailers is depending upon its quality, its branding image, its uniqueness and its popularity etc (Prasanth Singh, 2014). Over the past few years, online shopping has increased percentage of online buyer's in Chennai.

II. RESEARCH OBJECTIVE

- To understand the behaviour of the consumer in online shopping.
- To evaluate the factors affecting online shopping behaviour.
- To create an awareness about online shopping and make people interested in internet shopping.
- To give suggestion for the consumer about online shopping.

III. RESEARCH METHODOLOGY

The nature of this study is exploratory and descriptive because both primary and secondary data have been used. Primary data is collected from respondents and secondary data is collected from journals, books and websites.

IV. SAMPLING TECHNIQUE

In this study convenience sampling method is used. The source of the sample is limited to Chennai city. A structured questionnaire was used as the research instrument for this study. This structured questionnaire was prepared on the basis of objectives of the study.

V. SAMPLE SIZE

The sample size we take was 30 consumers of online shoppers and the study was conducted in Chennai city. In case of sample size 10 members were male and 20 members were female and the age group is between 18 - above 45.

VI. LIMITATION OF THE STUDY

This study is limited to Chennai city and sample size. A time constraint is also one of the limitations for this study.

VII. REVIEW OF LITERATURE

Prasanthsingh (2012) stated that online shopping is the new trend. The new online shopping concept is great example of the revolution in India. He concluded that online shopping has altered in terms of consumers purchasing or buying behaviour and also success of online shopping is based on the popularity, branding image and unique policies. Koufaris (2002) stated that there are different factors which come from information systems (technology acceptance model), marketing (consumer behaviour ) and psychology (flow and environmental psychology). Hermes (2000) states that 72 percent of online consumers revealed that customer service is a major
factor in online shopping satisfaction, if the customer service is not there customer will think that the organization is trying to hide something from them and not intending to solve the customers problem. Mohammad Hossein (2012) states that financial risks and non-delivery risk negatively affect attitude toward online shopping. He also states that domain specific innovativeness and subjective norms, attitude towards online shopping positively affect online shopping behaviour.

Data analysis and interpretation

Table I: Websites already visited

<table>
<thead>
<tr>
<th>Particulars</th>
<th>Frequency</th>
<th>Percentage</th>
</tr>
</thead>
<tbody>
<tr>
<td>Amazon</td>
<td>4</td>
<td>13.33</td>
</tr>
<tr>
<td>Snap deal</td>
<td>6</td>
<td>20</td>
</tr>
<tr>
<td>Flip cart</td>
<td>9</td>
<td>30</td>
</tr>
<tr>
<td>EBay</td>
<td>7</td>
<td>23.33</td>
</tr>
<tr>
<td>Others</td>
<td>4</td>
<td>13.33</td>
</tr>
<tr>
<td>Total</td>
<td>30</td>
<td>100</td>
</tr>
</tbody>
</table>

Source: Primary Data
Interpretation: From the above table it is observed that out of 30 respondents 30% of respondents use flip cart for online shopping, 23.33% use EBay, 20% use snap deal, 13.33% use Amazon and 13.33% use other websites for online shopping.

Table II: Consumers belief in using websites

<table>
<thead>
<tr>
<th>Particulars</th>
<th>Frequency</th>
<th>Percentage (%)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Security</td>
<td>20</td>
<td>67</td>
</tr>
<tr>
<td>Trust</td>
<td>7</td>
<td>23</td>
</tr>
<tr>
<td>Privacy</td>
<td>3</td>
<td>10</td>
</tr>
<tr>
<td>Total</td>
<td>30</td>
<td>100</td>
</tr>
</tbody>
</table>

Source: Primary Data
Interpretation: From the above table it is observed that out of 30 respondents 67% of consumers believe security is most important for website user, 23% believe in trust and 10% believe in privacy for website user.

Table III: Preferred method for online shopping

<table>
<thead>
<tr>
<th>Particulars</th>
<th>Frequency</th>
<th>Percentage (%)</th>
</tr>
</thead>
<tbody>
<tr>
<td>E-tailing</td>
<td>15</td>
<td>50</td>
</tr>
<tr>
<td>Re-tailing</td>
<td>15</td>
<td>50</td>
</tr>
<tr>
<td>Total</td>
<td>30</td>
<td>100</td>
</tr>
</tbody>
</table>

Source: Primary Data
Interpretation: From the above table it is observed that out of 30 respondents 50% prefer e-tailing and 50% prefer re-tailing for online shopping.

Table IV: Best payment method for online shopping

<table>
<thead>
<tr>
<th>Particulars</th>
<th>Frequency</th>
<th>Percentage (%)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Cheque</td>
<td>-</td>
<td>-</td>
</tr>
<tr>
<td>Debit or credit card</td>

<td>13</td>
</tr>
<tr>
<td>Bad</td>
<td>-</td>
<td>-</td>
</tr>
<tr>
<td>Total</td>
<td>30</td>
<td>100</td>
</tr>
</tbody>
</table>

Source: Primary Data
Interpretation: From the above table it is observed that out of 30 respondents 47% rate online shopping as good, 40% rate as very good and 13% rate as excellent for online shopping.

VIII. Findings

From the above study it is found that:
- The number of users of online shopping is increasing day by day. Mostly the age group from 18-25 are the frequent user's of online shopping and most of the females are very much interested in online shopping.
- 50% of consumers prefer online shopping (i.e) e-tailing and the rest prefer re-tailing.
- 30% of the online shoppers prefer flip cart for online shopping and 23.33% followed by e-bay.
- 67% of online buyers think security is most important for website users and 93% use cash on delivery for online shopping.
- 63% of online shoppers buy books through online shopping and followed by apparels.
- 47% prefer billboards for advertising online shopping and 36% followed by newspaper.
- Mainly 67% of consumers prefer online shopping for its preference followed by information provided about the products, convenience and time efficiency.
- It is also found that 57% of consumers choose online shopping annually rather than monthly and weekly.
- Consumers also think that there is risk in online shopping. 43% of consumers think that the quality of the product which they buy through online may not be good, 40% of consumers think that wastage of money and also malfunction of the product may occur in cases.

IX. Conclusion

In Chennai city most of the people select flip cart for online shopping and also online shopping had become a trend in this generation. Convenience and time efficiency are the dominating factors influencing online shopping consumers. Though there is financial risk and non-delivery of product risk 73% of the respondents prefer online shopping. This risk may not affect the buying behavior of the online shoppers.
